

I – Introduce about Jacot component

Jacot component used to replace defined words in contents with abbrev or acronym or lang.

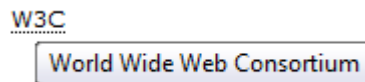

For ex:

Original text: W3C

You defined W3C with “World Wide Web Consortium” description. Jacot will replace the text.

Next text: `<acronym title="World Wide Web Consortium" lang="en">W3C</acronym>`.

Display of text (when mouse over this text):

Jacot has one component and one plugin. The component is used to manage text and the plugin is used to find defined texts and replace them.

II – Installation:

You must install both component and plugin of Jacot.

III – How to use:

1. Manage text:

When you logged in admin area you click on Components\Joomla Accessibility\Manager

You can add/edit/delete any text. To publish/unpublish them in front end, you just click icon image.

2. Replace text:

To replace text of content, you just enable Jacot plugin in Admin area. Go to Extensions\Plugin manager to do it

After it is enabled, it will replace texts in content automatically.
